ET Flex™ INTERPROXIMAL FINISHING AND CONTOURING STRIPS

The Patented, Safe, Flexible Design of ET Flex Allows You to Adapt the Strip to Meet All of Your Interproximal Finishing and Contouring Needs.

✓ Orthodontics: IPR/Tooth Slenderizing
✓ Composite Restorations: Contouring/Finishing all Interproximal Surfaces
✓ Crown & Bridge Restorations: Cement Removal and Clean-Up Following Cementation

ET Flex’s open design and strip depth allow you to easily reach all cervical areas of interproximal restorations.

ET Flex’s curved, non-slip textured surface area ensures a comfortable, secure, and stable grip.

ET Flex is color coded for grit designation.

ET Flex is fully autoclavable.

The VisionFlex™ mesh design prevents the strip from loading up as quickly as non-perforated strips, which improves efficiency and visibility.

Grip the ET Flex at or above the crossbar and the strip becomes taut for contact areas.

Grip the ET Flex below the crossbar and the strip curves allowing you to perfectly adapt to any cervical or contact area contour.

The non-diamond coated Gateway™ (on select ET Flex strips) allows you to safely pass through tight contacts for interproximal finishing of composite restorations and cement clean up in the cervical area.
