

Brasseler USA Introduces a New and Efficient Way to Polish Your Provisionals:
ET[®] ProviPro[™]!

Polishing provisionals with pumice and pastes is messy and time consuming. Brasseler USA's new ET[®] ProviPro[™] allows you to polish at chairside, saving both polishing and clean-up time.

This easy-to-use, two-step system will quickly allow you to achieve a high gloss shine and an ultra-smooth surface on composite and acrylic based provisionals! ET[®] ProviPro[™] polishers will eliminate the need for a bench lathe and rag wheel and are ideal for polishing crevices, grooves, contact areas and textured surfaces!

Available in medium and fine grits, these buffs, available exclusively from Brasseler USA, will minimize polishing time and save you money!
